WHAT IS CLAIMES IS

1.   A network system to be connected to a terminal device and a network server via the predetermined communication means, comprising:

said terminal device for transmitting the user specific information and the information of said terminal device to be used by said user as the specific information when the user uses said terminal device; and

said network server to specify said terminal device being used by said user by memorizing said specific information.

2.   The network system according to claim 1, wherein

said terminal device comprising an interface means equipped with the memory means in which said user specific information is stored, and transmits said specific information to said network server when said memory means is loaded.

3.   The network system according to claim 2, wherein:

said terminal device transmits information showing the completion of said user operation to said network server when said memory means is extracted from said interface means.

4.   A terminal device to be connected to the network server via the predetermined communication means, comprising:

a specific information transmission means for transmitting

45

said user specific information and said terminal device specific information to said network server as the specific information in the case where the user uses said terminal device.

5.   The terminal device according to claim 4, comprising:

an interface means equipped with memory means in which said user specific information is stored; and characterized by:

said terminal device transmits said specific information to said network server when said memory means is loaded.

6.   The terminal device according to claim 5, wherein

said terminal device transmits information showing the completion of said user operation when said memory means is extracted from said interface means.

7.   A network server to be connected to the terminal device via the predetermined communication means, comprising:

a specific information receiving means for receiving said specific information formed of said user specific information and said user using terminal device specific information to be transmitted from said terminal device when the user uses said terminal device;

a memory means for memorizing the specific information received; and

a specifying means for specifying the terminal device

being used by said user based on said specific information of
said memory means.

8.   The network server according to claim 7, wherein
      said specifying means,
      transmits message information to said user to the terminal
device in use by said user specified based on the specific
information of said memory means.
